Are you at high risk for breast cancer?

The National Institutes of Health (NIH) seek women who are at high risk for breast cancer to join a research study. Researchers want to identify and study breast tissue cells before they become cancerous. Results from this study may help doctors understand how breast cancer develops and find new ways to prevent it. The study requires two outpatient visits to the NIH Clinical Center: the first determines if you are eligible to take part in this study; the second involves a procedure to collect breast duct cells. (Compensation is provided).

You may be eligible if you are:
- A female 25 to 55 years of age
- At high risk for breast cancer

You may not be eligible if you are:
- Pregnant or breastfeeding
- On hormone replacement therapy or oral contraceptives

Location: The NIH Clinical Center, America’s research hospital, is located on the Metro red line (Medical Center stop) in Bethesda, Maryland.
