

NIH...Turning Discovery Into Health®

## NIH recruiting for **THYROID CANCER** research study

Doctors at the National Institutes of Health (NIH) are conducting a research study for thyroid cancer. Researchers are using a novel imaging technique called <sup>68</sup>Gallium DOTATATE PET/CT, which has been proven safe and effective in patients with other tumors – neuroendocrine tumors.

### Study Details:

- You will have a medical interview, physical exam, standard imaging for thyroid cancer
- Study related tests and standard of care for thyroid cancer is provided at no cost
- Study takes place at the NIH Clinical Center, America's Research Hospital in Bethesda, Maryland, on the Metro red line (Medical Center stop)

### Participation Requirements:

- Adults with known thyroid cancer that spread outside the thyroid and does not respond to radioactive iodine treatment
- Patient may not participate if they have serious underlying medical conditions that restrict diagnostic testing or therapy such as renal failure, congestive cardiac failure or active coexisting non-thyroid carcinoma
